

EVERGREEN RADIA IMAGING CENTER OPENS NOVEMBER 3, 2003

KIRKLAND, Wash. -- (Nov. 3, 2003) - Evergreen Radia Imaging Center opened Nov. 3, 2003, providing PET-CT MRI, CT, Ultrasound, and Walk in X-Ray services in a convenient outpatient facility. Offering increased access to imaging in response to the needs of physicians and patients in the Evergreen Healthcare community, Evergreen Radia Imaging Center provides several advantages:

- Full-service multi-modality center
- Convenient access for patients
- Fast, efficient reporting results
- Integration of existing Evergreen services with Radia
- Advanced imaging services

PET-CT - the most sophisticated PET-CT scanner available in the Pacific Northwest, LSO PET is four times faster than standard PET scanners. Fusion Imaging is a combination of both anatomy (CT) and metabolic function (PET) in a single study. This technology allows us to look directly at tumor metabolism and 16 slice multi-detector technology provides advanced CT angiography.

MRI - speed has reduced patient imaging time in some studies to 15 minutes, resulting in increased patient comfort and tolerance of the study.

Ultrasound - full spectrum of diagnostic ultrasound procedures.

Computed Radiography - a wide variety of radiographic plain film studies.

Fluoroscopy and Pain Management - a comprehensive selection of imaging-guided spine injection procedures for the non-operative treatment of spine-related pain.
